

OPHTHALMOLOGY

# Pe-Ha-Guard®

Pe-Ha-Guard® is a superior viscoelastic based on hydroxypropyl methylcellulose for reliable cornea hydration during ophthalmic surgery.

It can also be used as gliding agent for conventional injectors and cartridge systems for intraocular lens implantation.

- Stable cornea hydration
- High compatibility with other viscoelastic substances and BSS
- Optical clarity during surgery
- Easy to use and removeable
- Excellent gliding properties
- Sterile (by steam)
- CE marked

SPECIFICATION:	Pe-Ha-Guard® 2.0 %
Hydroxypropyl methylcellulose	2.0 %
pH	6.8 - 7.4
Osmolality [mOsm/kg]	255 - 345
Volume [ml]	2.5
Shelf life [months]	24
COMPOSITION [1 ml]:	Pe-Ha-Guard® 2.0 %
Hydroxypropyl methylcellulose	20.000 mg
Sodium chloride	9.000 mg
Disodium hydrogen phosphate 2 H <sub>2</sub> O	0.563 mg
Sodium dihydrogen phosphate 2 H <sub>2</sub> O	0.045 mg
Other components: sufficient quantity of HCl or NaOH	
Water for injection	q.s.
